PROFESSIONAL SUMMARY

Motivated person with a dual focus in Ai Engineering and Software Engineering. Skilled in **Python, SQL**, and **machine learning** frameworks, with hands-on experience building models and validating them. Strong foundation in **object-oriented programming, data structures**, and **version control** (Git). Ready to apply what I learned to build production-ready apps and models.

EDUCATION

Artificial Intelligence Specialization, Oxford University 07/2026 – 09/2026 | Oxford,UK

- Completed an intensive program covering neural network architectures and deep learning fundamentals, including hands-on lab work in model design, training, and evaluation
- Applied deep learning techniques to real-world datasets through structured lab assignments, translating theoretical concepts (backpropagation, CNNs, RNNs/transformers) into working models

Bachelor Degree of Computer Science, King Abdulaziz University 08/2022 – Present | Jeddah,KSA

Algorithms, data structures, software design, computational theory

Programming: Python, Java, SQL

Scalable software architectures and end-to-end ML models

Bridges theoretical data science with production-grade development

TECHNICAL SKILLS

Languages: Python, Java, SQL,HTML,CSS

Data Science & ML: Pandas, NumPy, Scikit-learn, Pytorch, Matplotlib, Data Cleaning, Data Preprocessing, Statistical Analysis, Data Analysis,Deep learning, CNN, Data Transformation , transfer learning, Fine Tuning,EDA,Cross validation

Backend: Django, FastAPI, Django REST Freamwork, API Developing,API Testing,AI integration

Databases: PostgreSQL, MySQL

Tools: Git,REST APIs

PROJECTS

Student Performance Prediction 03/2026 – Present

A Machine Learning project that predicts students' exam scores based on academic, behavioral, and productivity-related features. from this Project i learned about Machine Learning, EDA ,Data Preprocessing ,applying Cross validation.

DS Automation 02/2026 – Present

DS Automation is an intelligent full-stack platform that automates exploratory data analysis (EDA), generates insights, and provides ML model recommendations through an interactive AI assistant.

Built with Django REST Framework and Next.js, it streamlines the entire data analysis workflow from upload to actionable insights. from this Project i have learned about Django, Django REST Framework,API Developing , API Testing, AI integration.

Tomato Leaf Disease Prediction 03/2026 – Present

A Deep Learning project that classifies tomato leaf diseases using computer vision and transfer learning. The model analyzes leaf images and predicts the type of disease to help in early detection and crop protection. from this Project i have learned about Deep learning, CNN, Data Transformation , transfer learning, Fine Tuning

Batch Normalization using an SVD Layer 07/2026 – 08/2026

- Designed and conducted a controlled empirical study comparing a custom **SVD-based Rank Reduction (RR)** layer with **Batch Normalization** across 4 neural network architectures and 2 task regimes, completing **100+ training runs**.
- Implemented **Batch Normalization and truncated-SVD Rank Reduction from scratch in PyTorch**, including a custom autograd.Function with an **analytic backward pass through SVD**.
- Diagnosed a **5–25× performance gap** on a localization task through systematic experimentation, identifying BN's **independent per-feature normalization** as a limitation compared with the RR layer's ability to capture **joint feature correlations**.

EXPERIENCE

Data Science Club Kau, Technical Team Member 09/2025 – Present | Jeddah,KSA

Contributed to a cross-functional team in building a web application

Developed and tested APIs to support frontend functionality

Integrated large language models (LLMs) into the platform to enable AI-powered features

King Abdullah University of Science and Technology Academy, Ai Researcher Engineer 07/2026 – 09/2026 | Jeddah,KSA

- Developed and evaluated **machine learning and deep learning models** using Python and PyTorch across multiple problem domains.
- Implemented ML pipelines covering **data preprocessing, model development, training, validation, evaluation, and performance analysis**.
- Conducted controlled experiments and comparative evaluations to investigate **model behavior, architecture choices, and optimization strategies**.
